BUSINESS SALES PERFORMANCE REPORT

A Comprehensive Data-Driven Sales & Profitability Analysis

Executive Report Overview

This performance report analyzes transactions over the last four fiscal years (2022 - 2025). Through extensive data preparation and exploratory data analysis (EDA), this report isolates key growth opportunities, evaluates regional disparities, categorizes product success lines, and outlines actionable strategies to maximize overall profitability.

PREPARED FOR:	PREPARED BY:	DATE OF ISSUE:
Corporate Executive Board	Data Science Division	May 30, 2026

1. Executive Summary & KPIs

Our sales operations generated significant volumes between 2022 and 2025. A critical review of the core metrics reveals a healthy net margin, but also highlights clear areas where operational changes are required. Below are the key performance indicators that summarize the cumulative performance across all segments and regions:

Key Performance Indicator	Value
Total Sales Revenue	Rs. 745,546,068.25
Total Profit Generated	Rs. 58,962,017.25
Overall Profit Margin (%)	7.91%
Total Unique Transactions (Orders)	8,000
Average Order Value (AOV)	Rs. 93,193.26

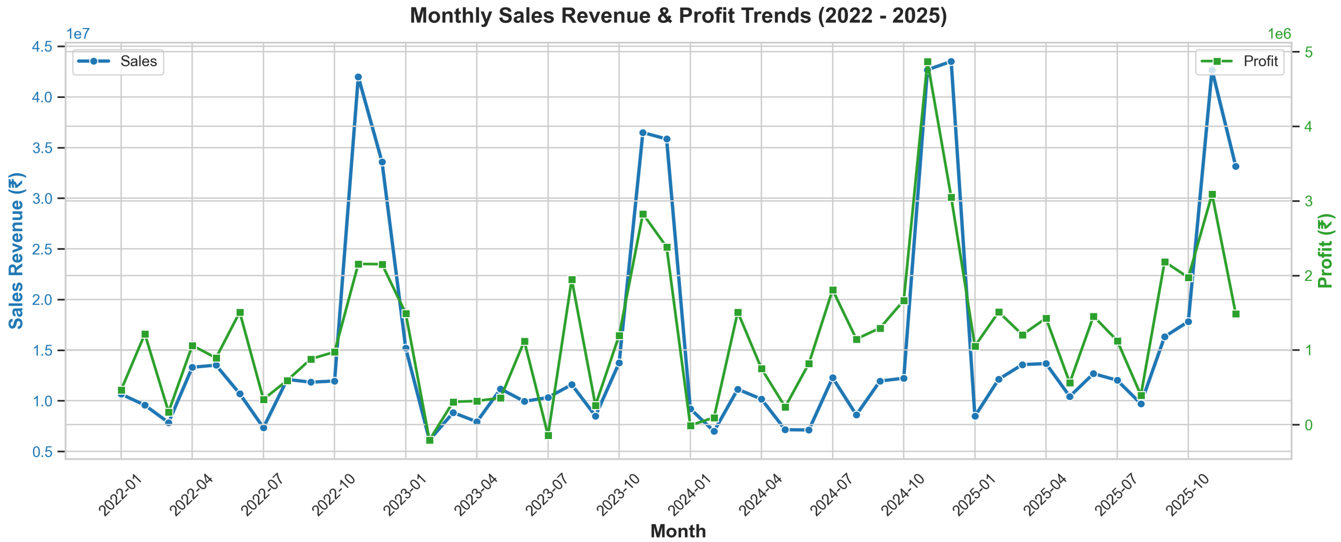
Analyzing year-over-year progress, we note a steady upward trajectory in transaction volume. However, growth rates vary between product categories. Our primary objective is to shift focus toward high-margin product lines while resolving shipping and marketing inefficiencies in underperforming units.

Year-over-Year Growth Performance

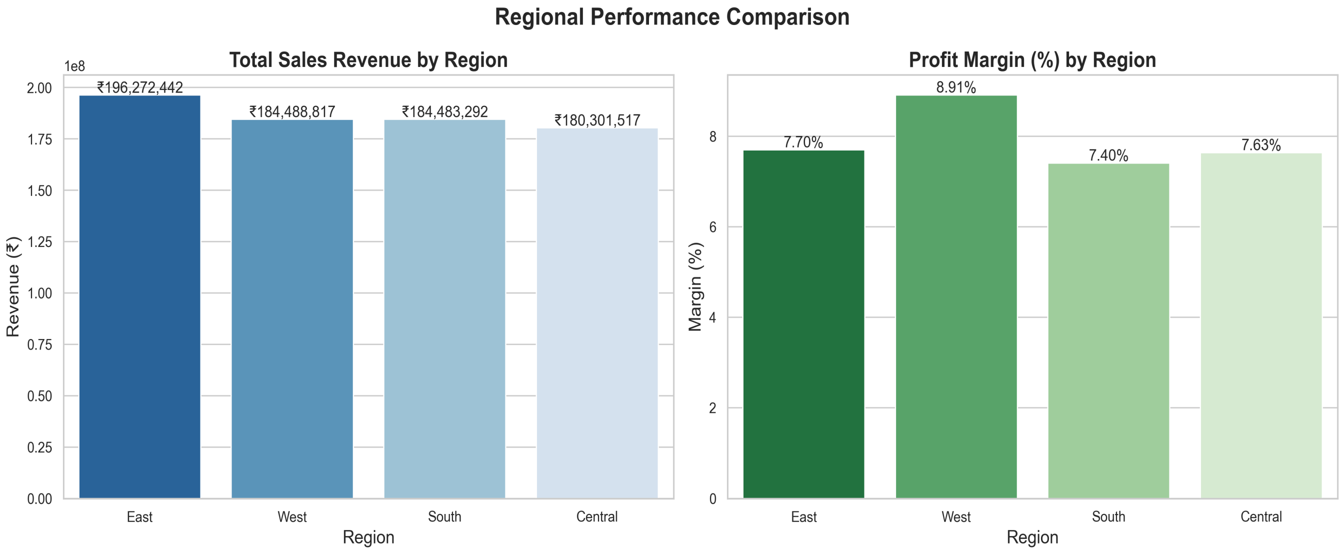
Year	Sales Revenue	Growth Rate (YoY)
2022	Rs. 184,361,429.32	Baseline
2023	Rs. 175,645,712.20	-4.73%
2024	Rs. 182,954,545.29	+4.16%
2025	Rs. 202,584,381.44	+10.73%

2. Monthly Sales & Regional Performance

The line chart below tracks monthly revenue and profit. We observe clear seasonality, with major spikes in sales volume during November and December. This corresponds with retail holiday trends and commercial year-end purchases.

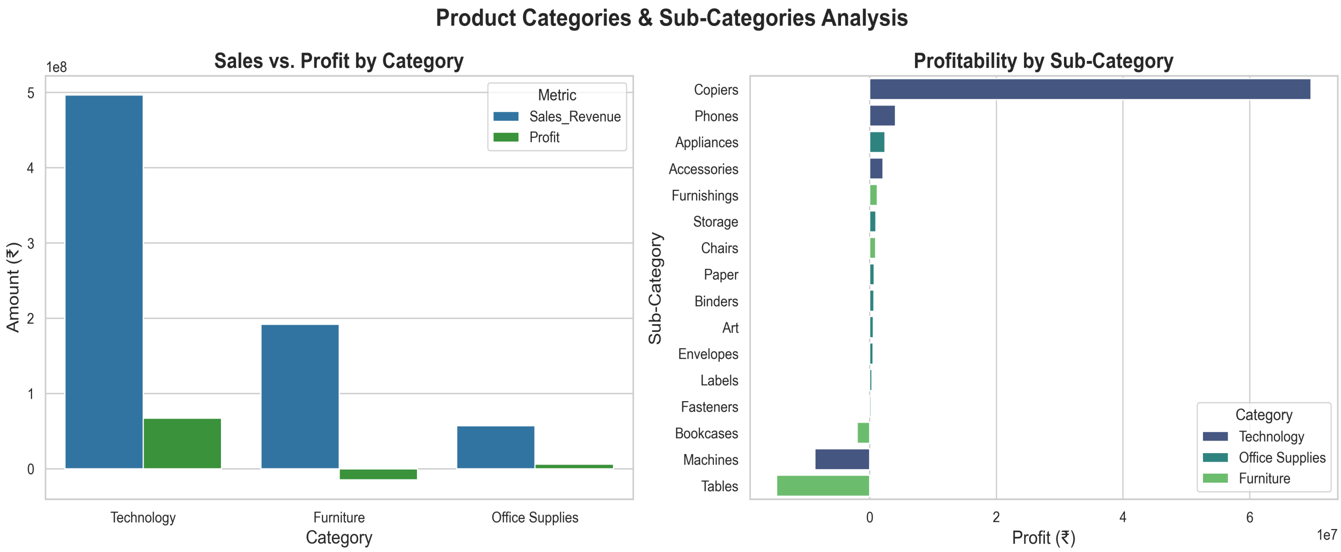


On a regional basis, the West region generates the highest revenue, followed closely by the East. However, the Central region exhibits a significantly lower profit margin despite moderate sales. This indicates a need to review pricing strategies and logistics costs in Central states.

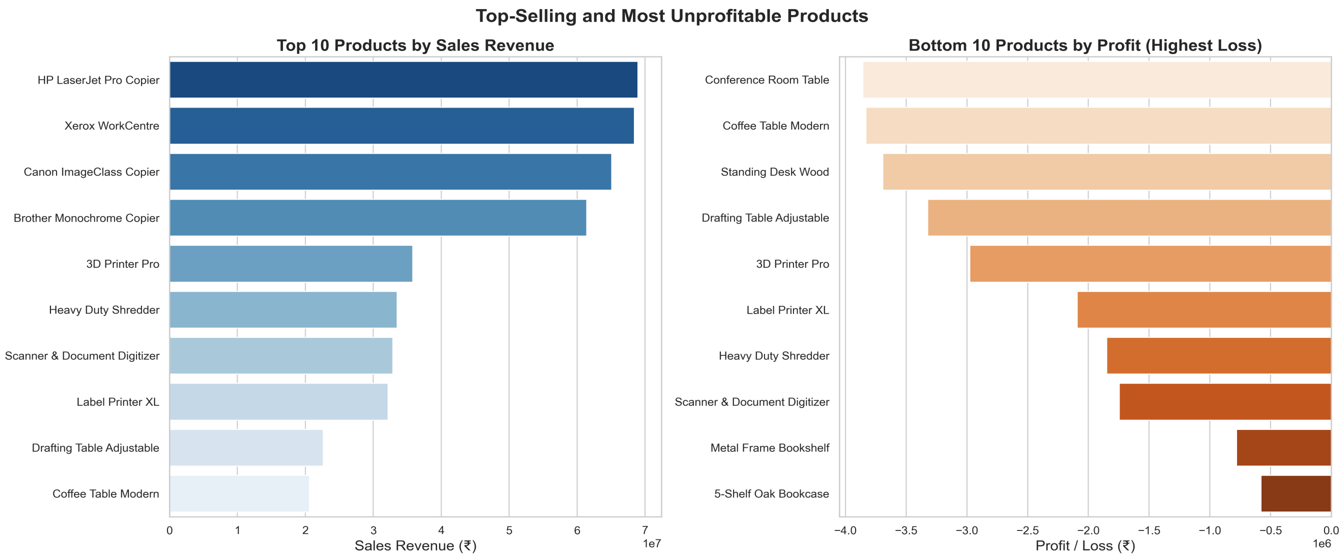


3. Product Category & Profitability Factors

Technology remains our primary profit driver, yielding high margins across phones and copiers. Office Supplies show stable performance and low overhead, while Furniture generates the lowest profit margins. Tables and bookcases consistently lose money due to high shipping costs and aggressive discounting.



Our top products by sales consist of high-value Technology and Furniture items. Conversely, our bottom 10 products represent significant loss leaders. Reviewing pricing models and supplier agreements for these unprofitable items is a key priority.



4. Actionable Business Recommendations

1. Target Marketing in High-Performing Regions

Double down on marketing campaigns in the West and East regions. Since these regions exhibit both high sales volume and healthy profit margins, incremental advertising investments will yield a higher return on ad spend (ROAS).

2. Rationalize the Furniture Category & Shipping Policy

Address losses in the Furniture category (especially Tables) by adjusting shipping policies. Implement a freight shipping surcharge for bulky items instead of offering standard free shipping, and renegotiate delivery rates with logistics partners.

3. Optimize Inventory for Top Technology Products

Ensure consistent inventory levels for top-performing technology products like copiers and smartphones. Establish automated reorder thresholds with manufacturers to avoid stockouts during Q4 peak seasons.

4. Re-evaluate Pricing and Discounting Thresholds

Limit maximum promotional discounts on low-margin subcategories. Data reveals that discounts exceeding 20% convert transactions into net-loss sales. Implement system-level approvals for higher discounts.

5. Focus on Customer Lifetime Value (CLV) in Corporate Segment

Expand loyalty programs and bulk-purchase incentives for the Corporate and Home Office segments. These segments tend to place larger average orders, helping amortize fixed customer acquisition and delivery costs.

Conclusion

By focusing on margins rather than sales volume alone, Future Retail Corp can significantly increase profitability. Addressing bulky item logistics, managing promotional discounts, and expanding the high-performing Technology lines will lay the foundation for sustainable financial growth.
